

AdBlue®

Description:

AdBlue® is a high-purity NOX reducing agent for diesel engines that are equipped with SCR technology (selective catalytic reduction) or soot particle filters with fuel afterburning.

AdBlue® meets the quality requirements set out in the German standard ISO 22241-1: 2006E.

Application:

AdBlue® is used to fill and refill all commercial vehicles that are equipped with a soot particle filter and AdBlue® tank.

(e.g.:

BMW, Ford, Mazda, Mercedes, VW Group)

Danger:

Under no circumstances may AdBlue® can be filled directly into fuel tanks, but only into the specially designed tank!

The shelf life of AdBlue® depends not insignificantly on the **Storage temperature** from. A temperature range of -5 ° C to + 25 ° C is recommended and, in addition, the product should be protected from direct sunlight.
